

Dear friends - Rotarians from Germany, members of Russian - German Bilateral Committee!

We represent Rotary Club Saratov-Centre (Saratov, Russia), Rotary district 2220.

More than 7 600 children with disabilities live in Saratov. They require daily care and attention not only from close people and parents, but also from doctors, teachers and the most important thing – from their contemporaries. The narrow circle of contacts corners children and brakes their development, though in many countries this problem is paid the great attention, and people with disabilities are considered as full members of society. Members of Rotary Club Saratov-Centre are worried by this fact and direct their activity to the help for children with disabilities and urge you to join the project «Help the child». The main point of the project is to create «Center of exchange and hire of medical and preventive equipment and implements» in the Saratov branch of

Russia Society of People with disabilities (see approximate photos). The majority of the equipment is considered for the certain age of children. But children grow fast and can't use it for a long time. Many parents don't have money for buying new equipment and do not know where to give or exchange equipment being in use of their children and in good condition. Creation of such a Centre in Saratov will help to solve this problem.

If you can to gather a funds for buying, purchase orthopedic equipment and products or donate to «Center of exchange and hire of medical and preventive equipment and implements» equipment already being in use and in a good condition you will render the invaluable help to children with disabilities.

We hope that we can find associates among the Rotarians of Germany and they will help us to realize the project «Help the child» on creation of «Center of exchange and hire of medical and preventive equipment and implements» in Saratov.
